eLatch™ Simplifies Narrow Stile Electrification

Electrifying a narrow stile aluminum door is now easier and faster than ever thanks to the introduction of the 4200 Series eLatch, a new “no-cut” solution from Adams Rite. The eLatch is an electrified deadlatch that provides 12- or 24-volt electric unlocking capability for commercial aluminum stile and glass door entrance systems.

The eLatch installs or retrofits without stile modification with Adams Rite MS Deadbolt prep. Simply change out an MS Deadbolt and slide the eLatch into the existing prep. Next, add a lever or paddle from the inside and door is good to go.

The eLatch is powered by an internally-mounted solenoid that gives instant access when interfaced with card readers, keypads, timers and other access control components. The eLatch is well suited for use in automatic door applications. It features key override, accepts a standard mortise cylinder (not included) with MS cam and is backed by a 3 year warranty.
