Press Release

SARGENT® locksets now compatible with S2 security management systems

New Haven – Facilities that operate the S2 Netbox and S2 Enterprise security management systems from S2 Security can now expand their locking capabilities following the successful integration of the Profile Series v.S2 and Passport 1000 P.2 WiFi-enabled locksets from ASSA ABLOY Group company SARGENT.

S2 Security customers running the S2 Netbox or S2 Enterprise management systems can now use a web browser to remotely manage any SARGENT WiFi locksets in their security network.

“Our partnership with S2 Security, gives end-users greater flexibility in their choice of locking hardware,” said Martin Huddart, Vice President Electronic Access Control for ASSA ABLOY Door Security Solutions. “With this integration now complete, facilities that employ the S2 security platform will now be able to experience the true features and benefits of the SARGENT wireless locksets.”

“We strive to offer value-added features to our customers and the integration of the SARGENT WiFi is an example of how we are constantly looking to improve service to our base of over 7,500 installed systems,” said John L. Moss, CEO, S2 Security.

The Profile Series v.S2 and Passport 1000 P.2 locksets utilize open-standard 802.11 b/g WiFi technology which allows facilities to leverage their existing wireless network or simply build a network with standard off-the-shelf products. Both locksets are available in mortise lock, cylindrical lock and exit device configurations. The v.S2 is

operated with a Prox reader and optional keypad, while the Passport P.2 works with magstripe cards. Both locks provide centrally managed control without many of the costs, labor and infrastructure upgrades associated with a traditional hardwired system.

S2 Security's S2 NetBox and S2 Enterprise products are IP-based integrated physical security management systems designed for facilities of any scale. S2 Security systems provide credential-based access control, event and alarm monitoring, video surveillance, analog temperature monitoring, and VoIP communications all controlled through a network appliance. S2 Security products deliver a rich browser-managed user interface that requires no software installation or maintenance, and can be accessed from anywhere at any time using only a common web browser.

About SARGENT

Founded in the early 1800s, SARGENT is a market leader in locksets, cylinders, door closers, exit devices, electromechanical products and access control systems for new construction, renovations and replacement applications. The company's customer base includes commercial construction, institutional and industrial markets. For more information visit www.sargentlock.com.

About ASSA ABLOY

ASSA ABLOY is the global leader in door opening solutions, dedicated to satisfying end-user demands for security, safety and convenience.

About S2 Security

S2 Security Corporation, headquartered in Framingham, Mass., provides Integrated Security for an IP-Connected World[®]. S2 is an innovator in the development of network-based integrated physical security systems supporting access control, alarm monitoring, temperature monitoring, video and intercom. S2's flagship product is the S2 NetBox[™], a network appliance based system that enables facilities of all types to manage their physical security needs from anywhere over IP networks.

S2 Security products are available by contacting the company at <http://www.s2sys.com>.
