

Additional Colors Added to IC Temporary Construction Cores

Along with the red 6- and 7-pin interchangeable core temporary construction cylinder now offered, Corbin Russwin is pleased to present the addition of blue and green cylinders.

These two new color options enhance the user's ability to easily control access to different locations on a construction site, or identify different locations for specific keying applications.

Availability

Orders for all three color options are being accepted now for 6- and 7-pin interchangeable core temporary construction cylinders.

How To Order

Refer to the chart below for proper Quick Codes:

Color	6-pin Quick Code	7-pin Quick Code
Red	CT6R	CT7R
Blue	CT6B	CT7B
Green	CT6G	CT7G

- When ordering with a lockset, specify by Quick Code:
 - ♦ Example: CL3355 x NZD x 626 x CT6B
- When ordering separately, specify Cylinder Number, Finish and Quick Code
 - ♦ Example: 1080-114-A01 x 626 x CT6G

Note: Orders specifying only CT6 or CT7 without the color designation will receive the Red IC temporary construction core by default.

Bitting

Below is the bitting for the different colored cylinder cores. Note that the Control Key bitting is the same for all three colors.

Color	Control Key	Change Keys
Red	152624	135624
Blue	152624	532644
Green	152624	354424

Pricing

There is no price difference when ordering different colors. Please see the current Corbin Russwin Price List for pricing of the Temporary Construction Core, 6-pin or 7-pin.
