

Access Control

Data Transfer Device (DTD) and SoloPlus™
Software**Corbin Russwin Announces the Availability of the Data Transfer Device (DTD) and SoloPlus™ Software**

The ASSA ABLOY Data Transfer Device (DTD) is now available from Corbin Russwin. This handheld device allows users of the Access 800® AC2 and the WM800 Wall Proximity Reader/Controller to upload programming and configuration files to the lock and download audit trails. Communication between the DTD and the lock is accomplished through infrared technology. The device is capable of programming and auditing up to 250 doors, and programming up to 2000 users.

The DTD can also be used with the Access 800® AC2 (M800 - 100 user version only) to retrieve audit trails, replacing the discontinued Infrared Portable Printers (793F019).

ASSA ABLOY *SoloPlus* software is included with the DTD for use with PCs and for storing information received from audit trails. *SoloPlus* software replaces Accessware® v2.0 software and is compatible with either the DTD or PDAs currently being used with Accessware v2.0 software. *SoloPlus* offers an updated user interface, a conversion utility from older Accessware databases, and the ability to choose whether to use a DTD or PDA for programming by site.

The DTD package includes:

- Handheld DTD
- *SoloPlus* software CD
- USB cable
- Four (4) AA batteries
- Instructions
- Lanyard

To order the DTD package, please specify 790F109. The *SoloPlus* software is also available separately by ordering part number 790F139.
