

CL3300

New Functions

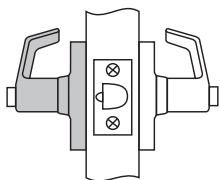

Corbin Russwin introduces two new non keyed functions for Cylindrical Lock CL3300 Series

Hospital Privacy function allows convenience and emergency access without need for emergency key. A dual push button lock, patient can close door and lock outside lever for privacy. Caretakers can immediately open locked door by depressing outside push button while rotating lever.

CL3320H Hospital Privacy

Outside | Inside

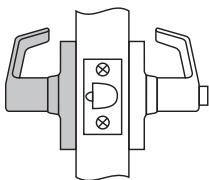

- Outside lever locked by inside push button. (Lever handle is freewheeling in locked position.)
- Outside lever unlocked by simultaneously depressing outside push button while rotating lever. Also, rotating inside lever unlocks outside lever.
- Inside lever always free.

Time Out lock provides temporary containment. Depressing push button and holding in place locks the detention side lever (freewheeling). Push button automatically releases when not held, returning lock to passage mode.

CL3320TO Time Out Lock

Detention Side | Caretaker Side

- Latchbolt by lever either side (passage) unless push button depressed and held by caretaker (detention side becomes freewheeling). Lock returns to passage mode upon release of push button.
- Push button automatically releases when caretaker moves away from door
- Both levers always free
